Challenge-2

Insert your name here 2023-08-20

Welcome! Hope you have watched the lecture videos and followed the instructions in code-along. Go through the steps described below,

carefully. It is totally fine to get stuck - ASK FOR HELP; reach out to your friends, TAs, or the discussion forum on Canvas.

Here is what you have to do,

- 2. **Download** the Challenge-2.Rmd and playlist_data.csv files from Canvas
- 3. **Move** the downloaded files to the folder, "Week-2"
- 4. **Set** it as the working directory

1. Pair with a neighbor and work

- 5. Edit content wherever indicated
- 6. **Remember** to set eval=TRUE after completing the code to generate the output
- 7. **Ensure** that echo=TRUE so that the code is rendered in the final document
- 8. **Inform** the tutor/instructor upon completion
- 9. Submit the document on Canvas after they approve
- 10. **Attendance** will be marked only after submission
- 11. Once again, **do not hesitate** to reach out to the tutors/instructor, if you are stuck

I. Exploring music preferences

A. Background

Imagine that you have been hired as a data analyst by a radio station to analyze music preferences of their DJs. They have provided you with a dataset, playlist_data.csv, containing information about DJs, their preferred music genres, song titles, and ratings.

Using the data-set you are required to complete some tasks that are listed subsequently. All these tasks are based on the concepts taught in the video lectures. The questions may not be entirely covered in the lectures; To complete them, you are encouraged to use Google and the resources therein.

B.Tasks

Task-1

In the lecture, we used two data-sets, starwars and anscombe's quartet that were readily available with the packages, tidyverse and Tmisc, respectively. When we have to use custom-made data-sets or the ones like we downloaded from Canvas, we have to import it using the R commands before using them. All the questions below are related to this task.

Question 1.1: What does the term "CSV" in playlist_data.csv stand for, and why is it a popular format for storing tabular data? **Solution:** Delete this text and insert your answer here

Question 1.2: load the tidyverse package to work with .csv files in R.

Solution:

Load the necessary package to work with CSV files in R.

Solution:

Question 1.3: Import the data-set, playlist_data.csv

Import the "playlist_data.csv" dataset into R read_csv("insert_name_of_dataset_with_extension")

Assign the variable to a dataset

Question 1.4: Assign the data-set to a variable, playlist_data

Solution:

insert_name_of_variable <- read_csv("insert_name_of_dataset_with_extension")</pre>

From now on, you can use the name of the variable to view the contents of the data-set

Question 1.5: Get more information about read_csv() command and provide a screenshot of the information displayed in the "Help" tab of the "Files" pane **Solution:**

More information about the R command, complete the code

read_csv()

knitr::include_graphics("name_of_the_file_with_extension")

Solution: Delete this text and insert your answer here

Type the name of the variable, to see what it contains

Question 1.6: What does the skip argument in the read_csv() function do?

Question 1.7: Display the contents of the data-set

Solution:

Only the list of commands that execute the task mentioned in the question are required

After learning to import a data-set, let us explore the contents of the data-set through the following questions

read_csv() function to import this file into R and store it in a variable named sales_data?

Solution:

Question 1.8: Assume you have a CSV file named sales_data.csv containing information about sales transactions. How would you use the

No output is required for this code

Task-2

Solution:

Solution:

Solution:

Question 2.1: Display the first few rows of the data-set to get an overview of its structure **Solution:**

Type the name of the variable we assigned the data-set to head(name_of_the_variable)

Question 2.2: Display all the columns of the variable stacked one below another

Stack columns of playlist_data

Solution:

Question 2.3: How many columns are there in the dataset?

Number of DJs

Question 2.4: What is the total count of DJs?

Number of columns

Question 2.5: Display all the location of all the DJs

Location of DJs

Question 2.6: Display the age of the DJs

Solution:

Age of DJs

Task-3

Solution:

Solution:

Solution:

complete the code to generate the plot ggplot(name_of_the_variable)

Let us plot the data to get more insights about the DJs.

aes(x=column_name,y=column_name)

Question 3.2: Label the x-axis as "Age" and the y-axis as "Rating." **Solution:**

Question 3.1: Create a plot to visualize the relationship between DJs' ages and their ratings.

complete the code to generate the plot

aes(x=column_name,y=column_name)

ggplot(name_of_the_variable)

Question 3.3: Represent data using points

complete the code to generate the plot

ggplot(name of the variable) aes(x=column_name,y=column_name)

complete the code to generate the plot

Question 3.4: Can you change the points represented by dots/small circles to any other shape of your liking?

ggplot(name_of_the_variable) aes(x=column name,y=column name)

geom_point() # <-- Hint: Use ? to learn more about geom_point and use appropriate values for shape

Question 3.5: Insert a suitable title and briefly provide your insights in the caption

Solution:

complete the code to generate the plot

aes(x=column_name,y=column_name)

ggplot(name_of_the_variable)
